TECHNICAL SKILLS

Front End | React Native, React, TypeScript, JavaScript, SwiftUI, Swift, GraphQL
Back End | Spring, Kotlin, Java, Flask, Python
Persistence | Core Data, DynamoDB, PostgreSQL, SQL, Redis
Testing/Deployment | Jest, JUnit, AWS, Terraform
Developer Tools | Git, Gradle, Maven, Docker

EXPERIENCE

Software Development Engineer II | OfferUp **April 2023 - Present**

Communications React Native | TypeScript | JavaScript | GraphQL | Spring | Java | Gradle | AWS

- Refactoring the item recommendation push notification logic into a dedicated microservice, streamlining the maintenance of the company's flagship marketing campaign
- Led the full stack development of adding message reactions to chat, increasing engagements per user by **0.5%**, encouraging users to return to the app and create more chat threads
- Contributed to the initiative of incorporating phone numbers and hazardous material indicators into shipping labels by updating the back end service and modifying item posting flows within the app

Software Development Engineer I | OfferUp **March 2022 - April 2023**

Communications React Native | TypeScript | JavaScript | GraphQL | Spring | Java | Gradle | AWS

- Led the implementation of sorting and pinning functionalities for messages, significantly enhancing the efficiency of power sellers in managing their listings, resulting in a **$700,000** per year ad revenue boost or a **2.3%** increase
- Architected and delivered a suite of new microservices dedicated to handling email campaigns which send around **7 million** emails weekly, leading to an increase of **22%** in weekly daily active users
- Migrated the existing meetups service from a Python monolith to a Java microservice using the Spring framework, reducing monthly costs by **94.86%**

Back End Software Developer | IBM **August 2021 - March 2022**

Data Policy Service Java | Gradle | Redis | IBM Cloud

- Implemented the ability for users to define custom predicates, empowering users to create rules more fit to their specific needs
- Developed an API within the IBM Cloud rule engine that converts abstract rules to discrete ones, allowing for more supported environments for customers
- Designed an algorithm that determines if a data protection rule is structurally similar to another one (or any of its variants) to reduce the amount of rules stored
- Built a visualizer tool that effectively demonstrates the impact of adding or removing rules to an IBM Cloud catalog, enabling users to make informed decisions about permissions

CURRENT PROJECT

Meeze **May 2022 - Present**

Side Project SwiftUI | Swift | Core Data

- Created and currently maintaining a native iOS application that allows users to create, store, share recipes, and effortlessly generate shopping lists
- Released publicly to the Apple App Store in **November 2022**

EDUCATION

Purdue University - Bachelors of Science, Computer Science, GPA 3.77, Dean's List 2021
